

(18) Insanely Profitable New Proven Trading Strategy | VuManChu Cipher B Indicator - YouTube

<https://www.youtube.com/watch?v=3RvKWdnrs2g>

Transcript:

(00:00) in this video i'm going to show you an extremely profitable trading strategy that uses the vu manchu cipher b plus divergences indicator found for free on tradingview this indicator is essentially a carbon copy of an extremely expensive indicator called the market cipher b i actually have the market cipher b paid version i've compared it to this one and they are essentially the same so i'm going to show you a very good strategy using this indicator along with a 200 period ema and a 50 period ema and i'm going to

(00:36) test it 100 times in a row so you guys can see how it performs over a series of trades showing all the results at the end but of course first you need to know the rules to the strategy so let's get into it really fast before we get into the strategy rules make sure to smash the like button comment down below for the youtube algorithm and use my buy bit link if you're interested in the best cryptocurrency exchange where you get paid to take limit orders also for anyone interested stick around at the end for a full life update and

(01:07) you won't be disappointed so let's get into the strategy rules now first things first let's go over the indicator and its settings so if we type in boom and 2 we can see vu manchu cipher b plus divergences by vu manchu put that up on your screen and it's going to look like this now we're going to get rid of some of the parts of it so we'll go into settings and under inputs we can get rid of the regular divergences we can get rid of the stochastic rsi as well then we'll go into style and get rid of the v-wap okay so now it's going to be looking

(01:45) quite a bit more plain where now we only have the money flow which is this red and green sort of area that is red when it's below the zero line and green when it's above the zero line down here at the bottom this is the same thing so we have money flow shown down here and also here you can just get rid of one of them if you don't want both there and then we have the blue waves with the crosses being shown by these dots so green cross or green dot is cross up red dot is crossed down on the blue waves all right got it we also have the 200 period

(02:22) exponential moving average and the 50 period exponential moving average so now we can get into the actual rules of the strategy rule number one you can only take longs when price is above the 200 period exponential moving average and you can only take shorts when price is below the 200 period exponential moving average rule number two you can only take a long position once price has pulled back into the 50 period ema such as in these four instances for a short you could only take a position once price has pulled back into the 50

(02:58) period ema such as in these two instances rule number three you can only take a long position if money flow is in the green and you can only take a short position if money flow is in the red rule number four you can only take a long position when the blue waves are below the zero line and you can only take a short position when the blue waves have come up above the zero line when all conditions are met the entry signal is given by the blue wave cross so if we get our cross up right here check all our conditions price is pulled back into the 50 period

(03:38) ema it's above the 200 period ema we have green for our money flow so we have a valid long position you'll take the long entry on this cross and set the stop loss just below the swing low targeting two times the risk let's take a look at this

other example here where the wave goes below the zero line and we get across up price pulled back to the 50 period ema price is above the 200 and we have money flow in the green so we have a valid long entry here targeting two times the risk here are a couple short examples

(04:19) we see price has pulled back to the 50 period ema it's under the 200 period ema the wave has come up above the zero line and money flows in the red so we get our red dot for the cross down and take our short entry here stop loss above the swing and targeting two times the risk next we have another time where the wave comes up above the zero line and crosses down right here all our other conditions are met so it is a valid short entry stop loss goes above the swing high and we target two times the risk well that's it for the strategy and some

(04:57) examples so let's get into the 100 tests i'm going to fast forward through it at 100 time speed and go over all the results at the end [Music] the results are in after the 100 tests and this one was extremely good making it one of the best strategies i've tested on the channel keep in mind this was only 100 tests but what this does tell us is that this has a lot of promise and it's definitely worth looking farther into this doesn't tell us if this standing alone as it is is going to be a long-term profitable system but

(05:51) it does tell us this is a great concept that you should definitely look farther into and potentially build a fully optimized system around the ideas used in this strategy so that is the purpose of all these videos is give plenty of ideas find out which ones are promising so that you guys have plenty of ideas to work with and know which ones are the most promising so it's going to be easy once you are ready to build your complete system and optimize it now let's get into the results here so this was tested on euro against the us dollar using a one

(06:24) to two risk award ratio on the 30 minute time frame which took seven months of price data to find the hundred trades there were 54 winners and 46 losses which is extremely good for a one to two risk award ratio most wins in a row was eight and the most losses in a row was six the gain on the account 62 percent again putting it up there at one of the top spots for all the strategies i've tested on the channel so let's pop this on over to the spreadsheet and do some comparisons here here it is on the spreadsheet falling at

(06:58) spot number three tying with spot number two for 62 gain on the account and this is out of 67 strategies tested so far on the channel so anything falling in the top 10 is quite good and very promising so i hope that anyone who doesn't have their system built yet this idea can help you out with coming up with ideas for your system definitely worth looking further into of course i'll say it again 100 tests doesn't prove the long-term success of a strategy but that's not the point of these videos the point is to find things that are

(07:36) promising and worth looking farther into so you guys have tons of ideas to build your trading system around so definitely a good one to look farther into eric approves and i'm also extremely happy that this actually did better than my paid market cipher test so this is the free version of market cipher people pay 1 500 for lifetime access to the market cypher and this is a free version of it that's nearly the exact same thing and it does extremely well so no need to spend your hard earned money thousands of dollars or

(08:14) if you want for only five months four hundred dollars for the market cipher b just don't do it it's not worth it there's the free vue manchu cipher b so shout out to the guy who created this indicator it is really good so um definitely was not hard for me to come up with this strategy and present it to you guys so eric approves once

again and hopefully you guys approve as well but anyway i'm gonna do a little life update right now and we'll call it a day so you guys who don't want to hear the life update i'll catch you later thank you so

(08:52) much for watching all right anyone interested in a life update here it is i am a free man outside of quarantine now in thailand and my wife gets out of her quarantine in two days which is amazing because we have been separated for quite a while due to the coveted travel restrictions so i'm gonna get to reunite with my wife and while i've been a free man here in bangkok i've met up with julian from a trader's journey a couple times now we've worked out together we've talked trading together and i've gotten him on board

(09:25) for my discord channel to help me out with some of the workload so go and check out a trader's journey it's a great youtube channel where he live streams daily in both the forex markets and now he's getting into the cryptocurrency markets as well but i think currently testing some things out on the crypto markets but he's live training forex for sure daily uh but yeah check him out and another huge update is that now that my wife's going to be getting out of quarantine and she's going to be the one doing all the filming and editing for

(10:00) the second channel the second channel will finally get some great content going on it it's gonna be tours of the places we're staying are my weird kind of traitor travel lifestyle that i have and um yeah seeing some cool nature some awesome super cheap amazing places in thailand and other countries once we go outside of thailand right now we have an airbnb booked in bangkok that is essentially the same price as a tiny one-bedroom apartment in seattle where i come from seattle washington but it's a massive villa with a pool and

(10:41) it's all fancy so it's pretty ridiculous for what you can get here for the price and otherwise i would never stay at such a nice place but you know the price is just so good and we're going to be hopping around a bunch of different places in thailand to check out the best beaches caves hikes waterfalls whatever it may be we're going to be hopping around a bunch of different places so we'll take you guys along on the second channel do give you tours of all the airbnbs we stay at and show you some of the beaches waterfalls hikes stuff like that

(11:18) and just kind of show you the weird lifestyle that i have as a kind of on-the-go trading slash youtubing type of person so yeah interesting type of thing i'm also a really young guy who's married to a filipina and yeah kind of a i have a weird life very very weird life myself so it might be interesting for some of you to check out that second channel it's actually linked on the channel art bottom right hand corner on my tray pro channel so you can click on that and subscribe to it if you see it there and we'll have

(11:55) content on it in only a few days just gonna do an intro video for it um just kind of introducing the channel what to expect from it stuff like that and then we'll do a tour of our place that we're staying at in bangkok and any of the future content will just be any adventures we're having whether it be you know thailand's street markets street food nature different airbnbs hotels stuff like that that you'd see in thailand and other countries once we leave to other countries yeah so that's pretty much my update

(12:25) thank you guys so much for watching have a fantastic day
