

Pullback Trading Strategy

This strategy will look for a trendline can work on both trend (Up or Down) For this strategy it's better to use it on a higher time frame 1hr - 1day but you may try it on 15minutes as well but has a higher probability on 1hr - 1day.

And also determine the market trend whether the chart or coin is on uptrend or downtrend.

Entry - Once candlestick breaks down or breaks out from the trendline wait for a slight pullback look for FVG or Orderblock. Note: Most of the time orderblock is not being touch better to use FVG Exit - Stoploss should be higher than Orderblock or FVG. Depends on your risk appetite. You may use Fibonacci to set TP 1,2 and 3.

TP 1 at 0.5

TP 2 at 0.618

TP 3 at 0.78

You may TP half of your position at TP 2 and let the remaining profit try and touch the support line where the trendline started.

1.58 Risk to reward for TP 1

2.68 Risk to reward for TP 2

4.58 Risk to reward for TP 3
